HELiOS

UNLIMITED PLM PERFORMANCE DEVELOPED BY ISD

Optimize your corporate processes

HELiOS is a multifunctional PDM/PLM solution that combines product, process and peripherals management in one single system. It allows a consistent storage, management and distribution of all process-relevant data in connection with the product life cycle. With HELiOS you can improve automation and benefit from many advantages – redundancy-free data management, automated workflows and reports, data security, effortless working across locations, and much more.

Don't search – find!

Once saved in the engineering department, the data are available to all departments involved in a project – Production, Purchasing, Service, Marketing, Sales, etc. – and can then be used throughout the entire product life cycle. HELiOS monitors all processes and constitutes the central "knowledge reservoir" of your company.

Process optimization with the HELiOS-APplus interface

Through its close linking to the ERP system APplus, HELiOS achieves an optimal mapping of all required processes –across departments and systems. On demand or upon release, articles and BOMs, including the linked drawings in PDF format, are transferred to APplus. This saves time, reduces costs and minimizes project lead times. The direct interface between HELiOS and the Dashboard in APplus gives the user comprehensive access to all product and project data.

HELiOS
AND APplus

isdgroup.com

HELiOS Connect 2 APplus!

The benefits

- Redundancy-free data management and quick data access across different systems
- Support of modification management
- Management, distribution and monitoring of all product data and documents from all systems
- Automated plotting and transfer to ERP upon release or on demand
- Out-of-the-Box solution
- Complete overview of products, with the option to jump from HELiOS to the Dashboard in APplus
- No manual article and BOM transfers required any more

Automation of all processes

- Optimized corporate processes with workflow, definition and access management
- Workflow-controlled automatic PDF generation
- Automatic printing of all production documents, and documents related to assemblies or projects
- Bidirectional article data creation, BOM transfer, document transfer

Other advantages

- No individual adjustments necessary
- Elimination of errors
- Consistent documentation in ERP
- No programming required
- Time and cost savings

COBUS ConCept and the ISD Group have already realized many projects together with great success. Feel free to contact us if you have any questions – we would be happy to provide you with more information.

Success needs a strong partner

Check out our innovative PDM/PDM solution - if you want to learn more, we will be delighted to demonstrate the advantages of our products in a personalized presentation or a free one-to-one consultation. Don't hesitate to contact us – we'll be pleased to help you.
